DELAWARE PUBLIC HEALTH SERIES

National DPP Coverage Toolkit Overview

In 2019, more than 75,000 adults in Delaware reported that they had been diagnosed with prediabetes. Preventing progression to type 2 diabetes improves patients' quality of life and reduces long-term health care costs. Learn how the National Diabetes Prevention Program (National DPP) can help you do just that.

As part of ongoing national efforts to establish Medicaid coverage for the National DPP, the [National DPP Coverage Toolkit](#) was developed in 2017 by the National Association of Chronic Disease Directors (NACDD), the Division of Diabetes Translation at Centers for Disease Control and Prevention (CDC), and Leavitt Partners (healthcare intelligence firm).

During this course, you will explore the toolkit to learn about patient eligibility, identification, recruitment, referral, and retention in the National DPP. [Click here to access the course.](#)

Questions?

For question about course content, please email Quality Insights Practice Transformation Specialist Patrick Weiss at pweiss@qualityinsights.org.

For technical assistance with the learning platform, please email EDISCO@qualityinsights.org.

Recommended Audience

The information in this course is intended for health systems; insurance providers; accountable care organizations; population health departments; educators, health coaches, and navigators; employers and others.

Learning Objectives

- Identify key information that is included in the National DPP Coverage Toolkit.
- List eligibility requirements and referral process for the program.
- Describe at least one way to screen and identify eligible patients for the program.
- State three ways to recruit eligible patients for the program.
- Discuss how retention strategies can improve patient outcomes, quality measures, and reduce overall costs.
